

AN ESSAY ON MARXIAN ECONOMICS by Joan Robinson

Think Effective Demand or Theory of Employment in  
Mod. Econ. provides basis for study of law of  
action of capitalism.

RUN LOSING RACE AGAINST COURSE OF HIS. FALL

- 5 strands of thoughts in Mx: (1) Unemployed army (fluctuates bet. stock of cap. offering opp. & supply of available labor)  
(2) Declining r. of p. (Greed for acc. substitutes itself by reducing r. of p.)  
(3) Relationship bet. w.p. and w.c.

c.v.e./output--"avoid ambiguity; also capital per man employed)

p.19 p.Movement from equal r. of explicit labor toward equal r. of p.  
entrepreneur not repacious. Moneybase, inert shareholders now.  
Prop. & enterprise not indistinguishable.

ASSUMPTIONS OF CONSTANT R. OF EXPL. & LAW OF VALUE

\*\*\*\*\* As soon as rigid subsistence level theory is abandoned, there is no answer as to what determines div. between total prod. bet. cap. & labor.

" Mx may be rescued only if it is argued that the marginal productivity of cap. is assumed to fall very sharply beyond a certain point."

If no inducement to invest is necessary, w.p./w.c. may be self-adjusting & no CHISFS, no matter how low level of subsistence.

-----  
supply price of cap.; Abnormal profits are normal rule. p.72  
overall monopsony.--elasticity of demand; low r. prices.

## THEORY OF EQUILIBRIUM of Ex. & Prod.

Consumers choice.

accepted doctrines: (1) ordinal view of utility

(2) circular relationship of cost and value

(3) opportunity cost principle.

Marginal productivity and functional equations.

UNTIL '80S there was no substantial increase in mathematical econ.; eclecticism

and at SAME TIME INTERNATIONALIZATION OF THEORY.

more preferred  
less preferred  
indifference curve

Marshall: cross bet. Ric. & Boen-B

Every Marshallian theory finds

its counterpart in restatement by Hicks.

"Proportionality of marginal utilities to prices becomes tangency of price line MARGINAL RATE OF SUBSTITUTION to indifference curve.

## THEORY OF MONOPOLY

## THEORY OF IMPERFECT COMP.

Diminishing Return: NOT REAL OBSTACLE to expansion of prod.--av. cost still diminishing at a point at which he stopped expanding, --hence MKT.

KEYNES --Classical pol. eco. concerned with distribution of social product rather than with AMOUNT, with relative share of national income rather than with forces which determine LEVEL. But one thing in common with classicists: dealing with: AGGREGATES & INTERDEPENDENCE INCOME CON. SAVING & INVESTMENT rather than with individual prices.

Effective demand: "the aggregate income (or proceeds) which the entrepreneurs expect to receive, inclusive of income which they will hand on to the other factors of prod., from the ext. of current employment which they decide to give."

1. TOTAL demand in terms of money for goods determines profitability.

2. This demand however is nothing more than TOTAL money income created within eco.

3. SAVING NATIONAL expenditure is identical with national income, and hence EMPLOYMENT

Expenditure: imp & acc / If employment depends upon size of national income, get'd. by a law.

what determines its level:

4. PSYCHOLOGICAL attitude to liquidity

5. PROPENSITY TO CONSUME--REL. BET. TOTAL INCOME & AGGREGATE CON. (fairly stable function of aggregate income)

Given propensity to consume the level of investment will determine what the equilibrium vol. of employment will be.

6. PSYCHOLOGICAL expectation of future yield for cap. investment.

7. MARGINAL efficiency of capital (determined
